Telvin Caesar Varfley

Software Engineer

Accra, Ghana telvinvarfley@gmail.com +233543566937 Telvin Varfley HakzTV

About me

Front-end–focused software engineer with a strong full-stack foundation and certified Azure expertise. I build fast, reliable, and human-centered web applications that solve real business problems. Experienced in delivering SaaS and cloud-native solutions for enterprise clients in Ghana, Kenya and the Ivory Coast. Developing a knowledge management platform used to centralize, secure, and scale organizational data for insight-driven decisions.

Professional Experience

eSolutions Consulting Ghana, Technical Consultant — Accra, Ghana
January 2024 – Present

- Spearheaded the front-end architecture for enterprise client applications using React and TypeScript and SPFX ensuring optimal performance, responsiveness, and adherence to modern UI/UX principles.
- Drove end-to-end product development by owning features from initial wireframe and user flow specification through to deployment and production monitoring.
- Developed user-facing applications and automation with React, TypeScript, and the Power Platform (PowerApps/Automate), resulting in a 30% increase in internal team productivity.**
- Enhanced front-end deployment reliability and speed ,by designing and implementing CI/CD pipelines (Azure DevOps) and managing infrastructure as code Bicep IaC for Azure App Service/Functions.
- Trained 50+ users in adopting new SaaS platforms, acting as the bridge between technical design and non-technical teams to **improve system adoption and reliability.
- Managing project delivery and updates via Azure Boards and Microsoft Planner.

Advertising & Publisher Solutions Ghana Ltd, Front-End Developer — Accra, Ghana
June 2023 – December 2023

- Rebuilt key product interfaces using HTML, Sass, BEM and JavaScript -increasing maintainability and reducing bounce rate by 28%.
- Built modular UI components and optimized rendering performance - reducing load times by 40%.
- Integrated user feedback into product design, leading to a 32% increase in engagement time.
- Reduced UI bug reports by 35% by enforcing clean architecture and reusable patterns.

Education

BSc **BluCrest College**, Bachelor of Science in Information Technology — February 2019 – May 2023

- Key courses: Computer Architecture, Learning Algorithms, Theory of Computability.

Projects

Wikora — Internal Knowledge Management System (SaaS) — Live Product

- Designed and built a multi-tenant internal knowledge management platform that enables organizations to create, organize, version, and control access to internal documentation through a single centralized system.

- Implemented role-based access control and organization-scoped data isolation using Firebase Authentication and Firestore, supporting user invitations, access revocation, and controlled knowledge sharing across departments.
- Engineered an offline-first data access strategy using Firestore persistence and optimistic updates using tan-stack query, allowing users to read and edit content in low-connectivity environments with automatic synchronization.
- Built a modular React and TypeScript front end (Vite) with protected routing, global authentication context, reusable UI components, and TanStack Query for efficient data fetching and cache management.
- Designed scalable domain models for documents, version history, and metadata to support future features such as analytics and AI-assisted knowledge retrieval.

Memo Application (SAAS Paperless Platform) GitHub Link

- Designed and developed a dynamic SaaS platform for small and medium enterprises (SMEs) to digitalise internal approvals, memos, and workflows reducing paper-based operations by around 35 percent.
- Tech stack: Appwrite (backend, authentication, and database) with React, Vite, and TypeScript on the front end. Built custom hooks, reusable components, and helper libraries to improve performance and maintainability.
- Engineered a responsive, role-based UI with real-time collaboration, version control, and document tracking — supporting a fully paperless process aligned with sustainability goals.
- Pushed code through GitHub and deployed to production environments using continuous delivery best practices.
- My consulting experience inspired the concept in Ghana, where enterprise-level digital tools saved significant costs but were inaccessible to SMEs. I therefore built a lighter, scalable version tailored for smaller businesses.
- Implemented subscription-based pricing to make the platform predictable, affordable, and growth-friendly for SMEs.

Production WordPress Hosting on Azure (IaC) GitHub Link

- Automated deployment of full stack via Bicep, Bash scripts and GitHub Actions.
- Delivered high-availability hosting: custom domain, backups, monitoring, and disaster recovery.
- Tools: Azure App Service (Linux), MySQL, Key Vault, DNS, Log Analytics.

Skills & Certifications

Certifications:
Microsoft Certified: DevOps Engineer Expert
Microsoft Certified: Azure Solutions Architect Expert
Microsoft Certified: Azure Administrator Associate
Microsoft Certified: Azure Virtual Desktop Specialty
Microsoft Certified: Azure Fundamentals [2]
Languages & Scripts: TypeScript, JavaScript, SQL, NoSQL, Bicep, jQuery
Tools & Platforms: Azure, Google Cloud Platform(GCP), Firebase, React, Tanstack, Appwrite, MongoDB, Power Apps, Power Automate, SharePoint, Git, GitHub, Figma
Soft Skills: Ownership mindset, problem-solving, communication, collaboration, fast learning, shipping in small iterations.
